

Spar Replacement

The spars on your kite have black rubber tips. When removing a broken spar, the rubber tips often stick in the kite's pocket. If this occurs, it is easier to remove the rubber tip from your new spare and insert the spar in the stuck rubber tip. When ordering specify tail spar or female wing spar with brass ferrule or male wing spar. You can order a complete spar kit on the Shopify store. Individual spars may be ordered by phone, text (250-404-0318 or e-mail sales@hawkkite.ca).
